

Assignment 1 – CITY: Bratislava Inner City Development

As a result of the dynamic development of Bratislava, the former industrial zone of Mlynské Nivy and Prístavná Street has become a part of the wider centre and at the same time an attractive area for development. At present, the area is brownfield in contact with the city centre, the Danube embankment and large development projects. Students will verify possibilities of development of new modern centre of Bratislava in the context of its eastern development, creation of new sustainable architectural-urban structures, with emphasis on quality of life, new transport solutions and ecological principles. The assignment is supported by cooperation with the Bratislava self-government in accordance with the preparation of the Bratislava strategic plan - intensification and efficiency of the use of the city territory and revitalization of brownfields.

The assignment is suitable for studios: Urban design, Residential and Civic Buildings, Ecological Architecture

Key characteristics: Urban design; architecture; cooperation practice/city; international cooperation

Rozvoj vnútorného mesta Bratislavy
