

Assignment 3 – COUNTRYSIDE: Sustainable Concept for Traditional Vavrišovo

Vavrišovo is a Liptov village in the area of the entrance to the Western, High and Low Tatras. In the village there is an interesting zone of farm buildings (barns), territorially separated from the housing structure of the village and at the same time in contact with natural and recreational elements in the area, such as the river Belá and open-air museum in Pribylina. In addition to broader considerations about the position of the village and its surroundings in the sub-Tatra region, the assignment offers students the possibility of verifying the revitalization of the original historic barn buildings as a resort for holiday accommodation, housing, apartments, cultural needs of the village and so on. In the architectural dimension it will be a question of reconstruction or rebuilding of buildings with the use of sustainable solutions in historical buildings and structures up to architectural and constructional detail. The attractiveness of the assignment is enhanced by the landscape scenery, which is also a challenge for the original graphical presentation of designs.

The assignment is suitable for studios: Urban design, Landscape architecture, Restoration of Monuments, Residential and Civic Buildings, Ecological Architecture

Key characteristics: Urban design; Architecture; Cooperation practice/city; International cooperation
